

## NEWSLETTER 2

# Meetings, Dissemination & Upcoming Results

Throughout the project implementation, partners have met regularly through Steering Committee Meetings, expert consultations, and technical coordination events to ensure progress and alignment across all work packages.

A major milestone is the Online Stakeholder Working Group Meeting, bringing together experts, unions, employer organizations, and policymakers to discuss conflict prevention during the twin transition. This meeting supports the preparation of EU-level recommendations to strengthen workers' participation.

The project also includes wide dissemination activities: newsletters, social-media outreach, promotional materials, and translation of all outputs into partner languages to ensure accessibility across the metal sector.

One of the key final events will be the Final Conference in Spain, where project findings, the updated online platform, and both publications will be presented to a broad audience of social partners. The event will promote best practices, knowledge exchange, and the long-term sustainability of project outcomes.

The final phase of the project will conclude with the publication of all results on partner websites and distribution of printed manuals across the participating countries.
